General Education System

乐聚机器人 LEJU ROBOT

Lower Primary (Foundation)

- Interest & Awareness Development
- Build computational thinking and digital literacy through visual coding and smart devices

Upper Primary (Exploration)

- Concept building & hands-on exploration
- STEAM project-based learning in real-world contexts; understanding basic AI and robotics concepts

Junior High (Development)

- Hands-on inquiry & technology application
- From understanding phenomena to learning principles and methods

Senior High (Innovation)

- Engineering practice & innovation
- Project-based learning to solve real-world problems and explore AI across disciplines

watermark

Students are encouraged to explore digital technology and AI tools safely/responsibly, develop problem-solving skills, computational thinking, and basic awareness of tech ethics & digital safety.

Strengthen data/algorithm basics, improve tech skills, develop computational & engineering thinking, and deepen ethical awareness.

Strengthen tech strategy, highlight innovative application, reinforce systems thinking, and promote responsible AI & digital ethics.

A progressive K–12 AI education framework for future-ready learners.
